Skills this role needs

Classroom facilitation	AI fluency	Digital literacy training	Kannada and English communication	Session scheduling and coordination

Job description

Mentor Together

Mentor Together is an Indian nonprofit that helps young people from low-income and first-generation backgrounds plan their studies and careers with the support of mentors. It works with colleges, governments and volunteers so that more young people can step into good first jobs with confidence. AI (artificial intelligence) is changing the work young people will do in those first jobs, so Mentor Together is working across the Government of Karnataka's college system to help students use it well. This role sits within Mentor Together's AI fluency programme, which teaches college students to understand AI, use it as a thinking partner, check its answers carefully and use it ethically.

Role

As an AI Fluency Trainer, you will stand in front of thousands of first-generation college students and help them see AI as a tool they can use with confidence at work. You will deliver up to 5 interactive classroom sessions of 60-90 minutes each to 5,000-6,000 students across a set of colleges in your assigned districts. You will plan sessions with each college, learn the curriculum well, teach in Kannada and English, and make sure students finish each session on the Mentor Together app.

Responsibilities

- Coordinate with each college's SPOC (single point of contact) to schedule sessions around the academic calendar.
- Learn and practise each session to Mentor Together's standards before teaching it.
- Deliver engaging, interactive classroom sessions on AI fluency in Kannada and English.
- Teach students how AI works, how to use it as a thinking partner, how to check its answers and how to use it ethically.
- Make sure students complete the in-app activities on the Mentor Together app that confirm each session is done.
- Track student completion in your colleges and work toward the monthly student-reach target.
- Travel across your assigned colleges and districts through the delivery period.

Requirements

- Experience training, teaching or facilitating sessions for large groups, ideally in a college or similar setting.
- A working understanding of AI and digital literacy concepts, or a clear ability to learn a set curriculum and teach it confidently.
- Fluency in Kannada and English, and ease in working with first-generation college students.
- Willingness to travel within your assigned districts from October 2026 to March 2027.
- Position 1 covers Belgaum, Dharwad, Uttara Kannada and Udupi; Position 2 covers Dakshina Kannada, Mysore, Hassan, Chickmagalur and Madikeri; Position 3 covers Shimoga, Davanagere, Haveri and Dharwad.
- A reliable and organised way of working, and comfort with being measured against a monthly student-reach target.

Benefits

- ₹25,000 for each module you deliver, including all applicable taxes, and up to ₹1,25,000 for completing all 5 modules.
- Payment for each module is released once the required number of students in your colleges have completed that session on the app.
- Travel, printing, stationery and event support costs are covered separately under Mentor Together's policy.

- A chance to reach thousands of first-generation college students and help them prepare for work.

About Mentor Together

Mentor Together is an Indian non-profit that works to bring mentorship to every young person in the country, particularly students from underprivileged backgrounds. It pairs college students with screened and trained professionals who volunteer their time, and structures the relationship around a work readiness curriculum rather than leaving it open-ended. The organisation describes mentoring as both an end in itself and a means to an end: a healthy, nurturing relationship supports a young person's social and emotional development, while a mentor also helps build the specific skills a young person needs at critical points in their life. Its stated ambition is a digital mentoring ecosystem that brings educators, employers and individuals together so that career mentorship becomes a normal part of the college experience. Much of its delivery now runs through its own mobile platform, which it positions as the world's first mobile mentoring platform.

Major Areas of Work

- One-to-one mentoring: Matching college students with volunteer professional mentors after a screening and training process on the mentor side.
- Work readiness and employability: Building the career skills, confidence and clarity that students need to move from education into work.
- Digital mentoring technology: Running and developing a mobile mentoring platform with an evidence-based process, a structured curriculum and AI-powered features.
- Institutional partnerships: Embedding mentorship inside colleges, NGOs and state education systems so it becomes part of the standard student experience.
- Corporate volunteering: Working with employers to make mentoring a route through which their employees develop and give back.

Major Initiatives and Programmes

- Mentor To Go: A mobile mentoring app that delivers career mentorship anywhere, built on an evidence-based mentorship process, a full curriculum and AI-powered features.
- Work readiness curriculum: The structured programme that shapes each mentoring relationship, using activities, quizzes and live discussions to build employability skills.
- Mentor recruitment and training: A pipeline that puts volunteer professionals through stringent screening and training before they are matched with a mentee.
- Institutional mentoring partnerships: Programmes run with colleges and NGOs that make mentorship part of how their students are supported.
- State government mentoring ecosystems: Work with state education and skills bodies to extend structured mentoring across public tertiary education.

Mentor To Go is the flagship. It is the channel through which the organisation scales beyond individual campuses, combining a curriculum-led mentoring journey with app-based matching and tracking, and it is the basis of its partnerships with governments, institutions and corporate volunteering programmes.

Impact

Mentor Together states it has supported more than 58,000 mentees, drawn from over 12 states and 71% of them young women, with a mentor pool of over 25,000 volunteer professionals, and cites more than 12,700 structured mentorships facilitated through the Mentor To Go app on its work readiness curriculum. Its own site reports more than 400 educational institutions and NGOs and more than 50 corporate partners, and it maintains partnerships with the Government of Karnataka's Department of Collegiate and Technical Education, the Government of Telangana's Telangana Academy of Skills and Knowledge, and companies including Amazon, Microsoft India, Cisco India, BT Group, LinkedIn, Cognizant, Target, Western Digital, Juniper Networks, Novartis and CGI.

Leadership

- Arundhuti Gupta, Founder and Chief Executive Officer
- Srikrishna Ramamoorthy, Managing Trustee, and Partner, Unitus Seed Fund
- Sunitha Viswanathan, Trustee, and Partner, Kae Capital
- Meera Venkatesan, Director of Program Development

Working here suits someone who wants to build a system rather than run one programme: the work spans volunteer management at scale, curriculum design, product and technology, and partnership-building with colleges, corporates and state governments. It gives exposure to how a mentoring model is standardised, measured and pushed through public education systems, and to the operational reality of matching tens of thousands of students with working professionals. It fits people who are comfortable with evidence-led programme design and with youth employability as a problem to be solved at population scale.
