ClimateCAP

Climate-Cap-22 (1).jpg

ClimateCAP is an initiative managed by Duke University's Fuqua School of Business, with financial support from the Hearst Foundations. It helps MBA students understand climate change as a business issue and prepare to lead on it in their careers. It runs an annual MBA Summit, an MBA Academy and a 12-month MBA Fellowship open to students from any country. Fellows learn with climate thought leaders, build a close cohort and carry out their own climate-action projects.

Role

The ClimateCAP MBA Fellowship is a 12-month, cohort-based programme for current MBA students who want to become climate leaders. Fellows join workshops and dialogues with thought leaders, build a community with their cohort, and design and complete an applied climate-action project with results that can be published. The programme is immersive and runs from January to December 2027, with almost everything held online and one in-person Summit in New York City.

Responsibilities

- Design a climate-action project and carry it out over the 12-month fellowship, alone or together with other fellows.
- Produce a public-facing deliverable from the project with results that can be published.
- Take part in workshops on academic, professional and climate leadership development.
- Join dialogues with climate thought leaders and business innovators.
- Attend periodic group check-ins and share progress on your project.
- Work with a one-on-one mentor or coach on your own development goals.

- Attend the ClimateCAP Summit and the Fellow-only event held alongside it.
- Act as an ambassador for ClimateCAP on your campus and in your wider network.
- Promote the ClimateCAP Summit and Fellowship to other MBA students.
- Engage with the ClimateCAP fellowship alumni community.
- Speak at a future Summit if invited.

Requirements

- Current full-time enrolment in an MBA programme for the entire fellowship year, January to December 2027.
- Graduating in December 2027 or later. One-year MBA programmes and non-traditional academic calendars may be considered.
- Dual-degree students are eligible if one of the degrees is an MBA and they graduate in December 2026 or later.
- Students from any country can apply. Attending a ClimateCAP partner school is not required.
- A strong command of the English language and an excellent academic record.
- A climate-action project idea, which is a required part of the application. The project can be new or build on existing work, but it cannot be paid work.
- Demonstrated interest or experience in climate-related or sector-specific work. Professional experience in climate change is welcome but not expected.
- Excellent research and writing skills, and strong communication skills.
- Self-motivation and the ability to work in a self-directed way.
- Flexibility and willingness to co-design the programme with the cohort.
- Ability to commit fully to the 12-month programme, with events held during US daytime hours. All elements are virtual except the Summit, held on 5-6 February 2027 at Fordham University's Gabelli School of Business in New York City.
- There is no application fee and no programme cost.

Benefits

- A fellowship award on selection into the programme. The award may be taxable, and tax is withheld automatically for non-US citizens studying outside the US.
- Where law or institutional policy prevents paying a fellow, ClimateCAP reimburses approved Summit travel, expenses and project costs up to the value of the award.
- One on one mentoring and coaching for personal development.
- Workshops on academic, professional and climate leadership development.
- A guaranteed seat at the annual ClimateCAP Summit, including a Fellow-only event.
- Networking with business leaders, innovators and a cohort of climate changemakers.
- Structured space to pitch ideas, get feedback and run your own climate project.

- Recognition on the ClimateCAP website and long-term membership of the fellowship alumni network.

About the Company

[Visit website →](#)

ClimateCAP is a learning initiative that prepares MBA students to understand and respond to the business risks and opportunities of climate change. It runs out of Duke University's Fuqua School of Business, through the Center for Energy, Development and Global Environment (EDGE). Daniel Vermeer and Katie Kross founded ClimateCAP in 2018 after noticing that most MBA programmes did not cover climate as a business issue, leaving companies to train new graduates on the subject themselves. ClimateCAP treats climate as a factor that affects business performance across every industry, not only energy and utilities, and works with a growing network of business schools to build this understanding into MBA education. 

Major Areas of Work

- MBA Climate Education: builds climate literacy into business school curricula through events, resources and shared programming across schools.
- Climate Leadership Development: trains MBA students to assess and respond to climate related business risks and opportunities.
- Business and Academic Partnerships: connects business schools, companies and climate leaders through a shared network and recruiting channel.

Major Initiatives and Programmes

- ClimateCAP Summit: an annual, weekend-long gathering connecting MBA students with business leaders to discuss climate's impact on business and society. The host school rotates each year, including Duke (2018), University of Virginia Darden (2020), Northwestern Kellogg (2022) and UT Austin McCombs (2023).
- ClimateCAP Fellowship: a 12-month, cohort-based programme for MBA students that includes mentoring, a stipend and a self-directed climate action project. It launched in 2023 with 12 Fellows from eight universities.
- ClimateCAP Academy: ongoing conversations with business leaders, academics, innovators and entrepreneurs on climate-conscious leadership.
- Partner School Network: a consortium of more than 50 business schools that share curricula, host joint events and collaborate on climate education.

Impact

Since its founding in 2018, ClimateCAP has brought together more than 2,300 Summit attendees, trained 55 Fellows through its fellowship programme and built a network of 54 Partner Schools worldwide.

Leadership

- Daniel Vermeer, Co-founder and Executive Director, EDGE Center, Duke Fuqua
- Katie Kross, Co-founder and Managing Director, EDGE Center, Duke Fuqua
- Jessica Wingert, Programme Leader, ClimateCAP

Partners

Harvard Business School, Duke University Fuqua School of Business, University of Michigan Ross School of Business (Erb Institute), Colorado State University, Fordham University Gabelli School of Business, Yale School of Management (CBEY), MIT Sloan School of Management, Emory University Goizueta Business School, and over 50 other partner business schools worldwide.

ClimateCAP suits people who want to work at the intersection of climate and global business education. The team works directly with top business schools, companies and climate leaders, and shapes how the next generation of MBA graduates understands climate risk. It offers exposure to an established, growing network rather than a single institution, with direct contact with students, faculty and industry leaders across the Partner School Network.
