Skills this role needs

Data visualisation	Data storytelling	Figma / Canva / QGIS	Headline and caption writing	Data analysis in Excel / Spreadsheets

Job description

CEEW

CEEW, the Council on Energy, Environment and Water, is one of India's leading think tanks. Its researchers study energy, environment and water, and use what they learn to shape public policy at scale. The organisation values curiosity, responsibility, leadership by initiative and a safe space for everyone who works there. This role sits within CEEW's Outreach team, which shares CEEW's research through media, social media, events, websites and print.

Role

As Senior Programme Communications Associate (Data Visualisation), you will help people understand CEEW's research through charts, maps and data stories they want to read, share and trust. You will design, write and think in data, and check the numbers and the framing with researchers before anything goes out. Reporting to the Senior Communications Manager, you will help set the direction of CEEW's data storytelling across social media posts, websites, print and physical formats.

Responsibilities

- Lead the direction of CEEW's data communications work, including new formats, and spot chances for data-led stories across its research.
- Plan, design and oversee data products in static, interactive, digital and physical formats, matching the format, visual style and story to each audience and goal.
- Produce charts, maps and data stories for social media, emailers, websites, events and print, with clear headlines, captions and short copy.
- Check every number against the source data, question the framing and work with researchers before any visual is published.
- Set and maintain the visual language, layouts, typography and style guidelines for CEEW's data products so they stay consistent across formats.
- Explore and adopt new tools and methods for data storytelling, including AI-based workflows for making charts.
- Build relationships with designers, agencies, visualisation specialists and other partners working in data storytelling.
- Support the Outreach team with media and social media work, and give hands-on data visualisation support for key events.

Requirements

- A bachelor's or master's degree in data journalism, information design, statistics or a related field.
- 3 to 5 years of experience making graphics for external audiences, with a strong record of high-quality charts for different media.
- Skill in Figma, Canva and QGIS and comfort with basic data analysis in Excel or spreadsheets, with coding skills as a plus.
- Excellent written English, including headlines, captions and short explainers written to publication standard.
- A sharp eye for detail and the curiosity to learn energy, environment and water topics well enough to question the numbers and the framing.
- A big appetite for news and research, and good knowledge of data storytelling at publications such as The Financial Times, The Economist, The New York Times, The Hindu and Ember.
- The ability to manage several projects and deadlines at once in a fast-paced team without losing quality.
- Based in New Delhi or willing to move there.

Benefits

- Pay that is above the market rate.
- A close look at how one of India's leading think tanks works, and a real chance to shape public views and policy through data.
- Room to lead by initiative and set the direction of CEEW's data storytelling.
- Smart colleagues who will challenge you and help you learn and grow fast.
- A culture that values curiosity and responsibility and offers a safe space for everyone.

About CEEW

The Council on Energy, Environment and Water (CEEW) is an independent, not-for-profit policy research institution based in India. Its work looks at how the country uses, reuses and misuses natural resources. Its research covers energy, climate, clean air, water and the circular economy. CEEW calls itself integrated, international and independent. It says it uses data, integrated analysis and strategic outreach to explain how resources are used and to change it. Its outputs include peer-reviewed studies, national surveys, modelling, data platforms and public communication aimed at policymakers, industry and citizens.

> *Headquarters: New Delhi, Delhi, India*

Major Areas of Work

- Energy Transition and Security: Research on the power sector, renewable energy adoption such as rooftop solar, and how secure India's coal, oil and gas supply chains are.
- Clean Air and Energy Access: Analysis of household cooking fuel use, including LPG and firewood, and of pollution sources such as stubble burning.
- Climate Risk and Adaptation: Assessment of heat-health risks, changing monsoon patterns and adaptation needs in vulnerable regions such as the Himalayas.
- Circular Economy and Sustainable Lifestyles: Work on organic waste, zero waste practices and behavioural changes that lower emissions.
- Climate Diplomacy and Global Policy: Analysis of international climate negotiations, including debates on moving away from fossil fuels.

Major Initiatives and Programmes

- CRAVIS: An AI-powered, conversational climate intelligence platform that brings local climate and sectoral data from trusted sources into one place for policy, research and communication.
- Zero Waste Manual for Schools: A schools programme aligned with NEP 2020 and the Swachh Bharat Mission that builds environmental awareness and waste management practices among students.
- What On Earth!®: A cartoon series that explains climate solutions such as food and water security and early warning systems to a general audience.
- CEEW Centre for Energy Finance: A centre that tracks clean energy markets and investment in India and builds data tools for investors and policymakers.
- Powering Livelihoods: An initiative that supports clean energy enterprises and decentralised renewable energy solutions for rural livelihoods.

Impact

CEEW states that it has published more than 680 peer-reviewed studies and over 800 opinion pieces, and that it has enabled more than 80,000 livelihoods. Its own site also cites more than 770 seminars and conferences.

Leadership

- James Abraham, CEO
- Arunabha Ghosh, Founder

CEEW suits people who want to do rigorous, evidence-based policy work on energy, climate and resources in India. Teams combine data analysis, modelling, surveys and field research with outreach to government, industry and the public. That gives staff direct exposure to how research shapes national policy and international climate negotiations. Topics range from household cooking fuels to energy finance and climate risk, so there is room to build deep expertise in one area while working alongside specialists in others. It is a good fit for researchers, analysts, economists, engineers and communicators who are comfortable with quantitative work and public-facing outputs.
