Skills this role needs

Public health programme management	Government liaison	Monitoring and evaluation	Team supervision	Report writing

Job description

PATH

PATH is a global nonprofit that brings new health ideas and tools to the people who need them most. It has 50 years of experience, a team of experts around the world, and partners in more than 70 countries. Each year its work helps millions of people get better health care. In Madhya Pradesh, PATH runs a school-based project to prevent and manage CMD (cardio-metabolic disease), meaning heart disease, diabetes and related conditions, among children and teenagers aged 6 to 16, starting in Bhopal district. This role sits within PATH's Health Systems Strengthening portfolio, which works with governments to make public health services stronger.

Role

As State Technical Officer, you will be the main technical lead for the CMD project in Madhya Pradesh. You will plan the work at the state level, work closely with government health and education departments, and guide district teams. The project raises awareness in schools, screens students for risk, and links them to counselling, referral, treatment and follow-up through existing government health programmes. You will report to the Advisor Family Health at PATH India and supervise the District Program Officer and other district staff.

Responsibilities

- Lead the planning, delivery, monitoring and quality of all project activities across the state, including yearly work plans and guidelines.
- Bring together government programmes such as RKSK (Rashtriya Kishor Swasthya Karyakram, the national adolescent health programme), RBSK (Rashtriya Bal Swasthya Karyakram, the national child health programme), NP-NCD (National Programme for Prevention and Control of Non-Communicable Diseases), Ayushman Arogya Mandirs (health and wellness centres) and the School Education Department so they work together on the project.
- Act as PATH's main contact with the NHM (National Health Mission), the Directorate of Health Services, the State NCD (non-communicable disease) Cell and the School Education Department, and represent PATH at state meetings and working groups.
- Supervise and mentor District Program Officers and district staff through field visits, regular reviews and training sessions.
- Set up systems to track key project numbers, check data quality, and lead monthly, quarterly and yearly reports for PATH, donors and government.
- Develop training materials, job aids and IEC/BCC (information, education and communication / behaviour change communication) resources, and train government staff, health teams, peer educators and counsellors.
- Guide teams on heart and metabolic disease risk factors, BMI (body mass index) screening, referral, counselling and follow-up care.
- Support budgeting and activity tracking, make sure the project follows donor, PATH and government rules, and record lessons and success stories to plan for scale-up.

Requirements

- A bachelor's degree in medicine, public health, health sciences, social sciences, health management, hospital administration or a related field, with a postgraduate degree or diploma such as an MPH (Master of Public Health), health administration, community medicine or epidemiology preferred.
- At least 7 to 10 years of experience in public health programme implementation, health systems strengthening or government health programmes.

- Experience working with the National Health Mission, state health departments or non-communicable disease programmes, and coordinating with senior government officials at state and district levels.
- Experience supervising and managing district-level teams.
- Experience in monitoring and evaluation, programme reporting and using data to make decisions.
- Strong skills in government liaison, report writing and presentations, and good use of Microsoft Office and data management tools.
- Fluency in Hindi and English, both written and spoken.
- Based in Bhopal and able to travel regularly across Madhya Pradesh to districts, schools, health facilities and government offices.

Benefits

- Lead a state-level public health project that can grow to more districts.
- Work closely with senior government officials in health and education.
- Be part of a global nonprofit with 50 years of health experience and expert technical teams.
- Help children and teenagers stay healthy by catching heart and metabolic disease risks early.

About PATH

PATH is a global health organisation that works with governments, public institutions, businesses, grassroots groups and investors in more than 70 countries to solve major health challenges. Its stated goal is health equity: making good health accessible for everyone, everywhere. Its global team includes scientists, clinicians, designers, engineers, advocates and specialists from many other fields. PATH focuses on getting health innovations such as vaccines, diagnostics and digital tools to the people who cannot yet access them. Its PATH Strategy 2030, titled "From Innovation to Impact", centres on turning scientific and technological advances into lasting health gains, with an emphasis on country ownership and women's health.

> *Headquarters: Seattle, Washington, USA (India office: New Delhi)*

Major Areas of Work

- Immunization: Strengthening vaccine delivery, including reaching zero-dose children and immunizing people in humanitarian settings.
- Infectious disease control: Supporting malaria control and elimination and earlier diagnosis of tuberculosis.
- Health systems strengthening: Improving hospital care, infection prevention, oxygen systems and community health worker networks.
- Digital health and AI: Using connected data and AI tools to support diagnosis, disease surveillance and coordinated One Health action.
- Women's health and wellbeing: Addressing gaps in care for women, along with mental health and safe use of medicines.

Major Initiatives and Programmes

- PATH Strategy 2030: The organisation-wide strategy for moving health innovations from discovery to wide access, with locally led, country-owned approaches.
- Vaccine development and introduction: Work on vaccines for low-resource settings, including MenAfriVac, and on immunization programmes that reach underserved children.
- Malaria control and elimination: Support to national malaria programmes, including in Nigeria.
- AI-enabled TB screening: AI-supported X-ray screening in hospitals so clinicians can identify tuberculosis earlier.
- Oxygen systems: Training centres and support to build stronger medical oxygen supply and use.
- Hospital infection prevention: Work with hospital staff to improve infection prevention and control and make care safer.

Impact

PATH states that it works in more than 70 countries, has helped immunize hundreds of millions of people, and improves 64 million lives every year through its work. It cites a three-star rating from Charity Navigator, the Platinum Transparency seal from Candid, and a place on Forbes' list of top US charities.

PATH suits people who want to work where health science, product development, policy and on-the-ground delivery meet. Its teams work on vaccines, diagnostics, digital tools and health systems with governments and partners in many countries, so staff see how innovations move from the lab to clinics and communities at national scale. It fits public health professionals, clinicians, researchers, engineers, data and digital specialists, and programme managers who want to work on technical problems with a global reach.
